## Overview

### What is it?

- v A service provided by OCIO
- v Validates and standardizes mailing addresses into the United States Postal Service (USPS) format
- v Provides National Change of Address (NCOA) updates for your database

### Advantages

- v Provides standardized address information in your database
- v Receive postal discounts for presorted bulk mailings
- v NCOA provides current address information of your clients/customers
  - o Provides lower postal rate
  - o Provides updated addresses
- v Can be utilized for mainframe data as well as server databases

## Cost

- v Address Validation/Standardization: One half cent (.005) per address plus time and material for job setup and any manual processing.

## Getting Setup

To batch process addresses with the Address Validation Service you will need to be setup to process. To setup batch processing, follow these directions:

1. If this is the first time you have ever been to this site, click [here](#) and then use the "Login" link to gain access. Use your A&A account id and password to login.
2. After you have logged in press the "Request to join project" button. This step can be skipped if you have done this before.
3. Complete [Batch Processing Request Form](#). (Requests are attempted to be completed in 2 business days) (See "Request Form Field Definitions" section below for help.)
4. Provide a file layout (column numbers and field description). [Click here to view a recommended file layout.](#)
5. Provide a sample of your batch file with minimum of 100 unique addresses for NCOA.
6. The location where the file should be picked up/dropped off (fileshare or FTP site). We can send/retrieve from your site, but you will need to provide a domain or IP address, username, and password. You can also use the shared FTP environment available through the State.

## Request Form Field Definitions

- **Priority:** The value selected in this field along with the "Output Needed By" date will help us to understand how important this job is to be ran against others that might be also be requested or being worked on at the same time.
